

i-Mature

Age Recognition System - Children Safety Online

Presenting next generation technology for protecting child safety online:

- **Secured Internet 4Kids –**
A new service offered by ISPs. Kids are allowed to surf only at a secured and approved list of sites ('white list'), protecting them from inappropriate web content and exposure.
- **Secured Instant Messaging 4Kids Only –**
A new service offered by IM providers. i-Mature is the first and only system that enables launching this safe IM product, which provides 'adults free' IM environment, free from online predators.
- **Secured Social Networks and Chat rooms 4Kids Only –**
A service provided by Networks, Portals, Websites, content and online gaming providers. i-Mature introduces a unique solution that prevents users of different age groups to engage in private discussions, thus limiting children's ability to interact with stranger adults on the Net. This is a revolutionary safety solution of utmost importance.
- **Applications Outside the Internet Arena –**
i-Mature system can also protect the safety of children from harmful adult content and exposure in cable TV, video and electronic games, and more applications.

System Description

- i-Mature Age Group Recognition (AGR) cutting-edge technology enables the establishment of a 'Kids only' or 'Adults only' online environments or social network.
- AGR is based on human finger biometric scanning. Its sensors perform online, in real-time, an age verification process, which determines whether a user is a child under a required age or the user is above that age.
- i-Mature is deploying the first biometric technology that does not require using a database. It is a 'one time' measurement; therefore, user's privacy cannot be compromised.
- The system does not need to identify the individual person but only his age group category.
- The system enables to control access online to any content, media or service.

Unique Features

- Device's shape and function is similar to a computer mouse.
- It is connected to user's computer via USB Port.
- It is compact, easy-to-use and cost-effective.
- High accuracy rate, almost impossible to intercept.
- Parents who are not familiar with the Internet can easily utilize the technology, without having to deal with keywords, passwords or downloading software programs.

Partnering with us

- **Products** – i-Mature sells its AGR™ system and services.
- **Licensing** – i-Mature licenses its AGR™ technology for integration in services and applications.
- **Development and Co-development Services** – i-Mature offers both development services and co-development services to OEMs and systems integrators. Such collaboration, for example, has been announced between i-Mature and RSA Security, the world's leading provider of two-factor user authentication systems, for integrating RSA user authentication systems with AGR technology.
